

CloudSync

User Guide & Frequently Asked Questions

Version 3.2 · Last updated June 2026

1. Getting Started

CloudSync is a cross-platform file synchronization service. To begin, download the CloudSync desktop application from your account dashboard and sign in with your registered email address. New accounts include a 14-day trial of the Business plan, after which the account automatically reverts to the Free plan unless a paid plan is selected.

During setup, you will be asked to choose a sync folder on your local device. Any file placed in this folder is automatically uploaded and made available across all devices linked to the same account within approximately 30 seconds, depending on file size and connection speed.

1.1 Supported Platforms

CloudSync desktop clients are available for Windows 10 and later, macOS 12 and later, and major Linux distributions via a .deb or .rpm package. Mobile apps are available for iOS 15+ and Android 10+.

2. Pricing Plans

CloudSync offers three subscription tiers, billed either monthly or annually. Annual billing includes a 20% discount compared to the monthly rate.

Plan	Storage	Monthly Price	Devices
Free	5 GB	\$0	2
Personal	500 GB	\$7.99	5
Business	5 TB	\$19.99 per user	Unlimited

Upgrading or downgrading a plan takes effect immediately, and any unused portion of the current billing period is prorated as a credit toward the new plan. Downgrading from Business to Personal is only permitted if the account's current storage usage is below the destination plan's storage limit.

3. Data Security

All files are encrypted in transit using TLS 1.3 and at rest using AES-256 encryption. CloudSync does not have access to the encryption keys used for Business-tier accounts with the optional "Customer-Managed Keys" add-on enabled.

Two-factor authentication (2FA) is available for all account tiers and is mandatory for Business accounts with more than 10 seats. Supported 2FA methods include authenticator apps (TOTP) and hardware security keys (FIDO2/WebAuthn). SMS-based 2FA is not supported due to known interception vulnerabilities.

3.1 Data Retention

Deleted files are moved to a recoverable trash folder for 30 days on Personal and Business plans, and 7 days on the Free plan. After this period, files are permanently purged from all backups within an additional 14 days.

4. Troubleshooting & Support

If a file appears stuck in a "syncing" state for longer than 10 minutes, first check the Activity tab in the desktop app for error messages. Common causes include the file being open in another application, the file exceeding the plan's maximum file size limit (15 GB on Personal, 100 GB on Business), or a temporary outage on CloudSync's servers.

Free and Personal plan customers can reach support via email, with a typical first response time of 1-2 business days. Business plan customers have access to live chat support with a target first response time of under 1 hour during business hours (9 AM-6 PM in the account's registered timezone).

4.1 Account Recovery

If you lose access to your account's registered email and 2FA device simultaneously, account recovery requires submitting a government-issued ID along with the original account creation date through the support portal. Recovery requests are processed within 5 business days for security review.
